PROFESSIONAL SUMMARY

B.Tech Computer Science student and full-stack developer who has shipped 3 production-grade web/AI platforms in the past 8 months, spanning React, Node.js, Django, Flask, FastAPI, and LLM-based systems (Llama 3, Groq API). Comfortable working across the stack – from React/HTML/CSS front ends, through REST APIs and authentication, to Python-based ML pipelines (Random Forest, TF-IDF, Scikit-learn) – with experience architecting scalable, secure, two-sided applications.

EDUCATION

B.Tech - (Computer Science & Technology), 2024-2028
LJ University, Ahmedabad

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, HTML5, CSS3
Frontend: React, Responsive Web Design, UI & UX Design, Tailwind
Backend Frameworks: Django, Flask, Node.js, Express, FastAPI, Docker, cloud, CI/CD, caching
Databases: Supabase, MongoDB, SQLite
AI / Machine Learning: Llama 3, Groq LLM API, Random Forest, TF-IDF, Scikit-learn, Pandas
Tools & Platforms: Git, GitHub, VS Code, Browser Developer Tools
Other Skills: REST API Integration, Microservices Architecture, Authentication & Security

PROJECTS

CareerCompass – AI-Powered ATS Resume Tracker & Job Matcher June 2026

Tech Stack: React.js, Node.js, Django, Groq LLaMA 3.1, Scikit-learn

Architected a dual-service full-stack platform separating core app logic (React + Node.js) from AI/ML processing (Django), reducing manual resume-screening time from 2 minutes to 25 seconds per resume and enabling independent scaling of each service. Engineered NLP and ML pipelines (Groq LLaMA 3.1, Random Forest, TF-IDF) to automate resume screening and job matching, validated against 60+ test resumes during development. Designed secure authentication and REST APIs powering a two-sided portal experience for candidates and recruiters, connecting the React front end to Node.js and Django services.

AI PDF-to-MCQ Generator March 2026

Tech Stack: FastAPI, React, Llama 3, Groq

Built a full-stack, LLM-powered assessment system (React front end + FastAPI backend) converting large PDFs into adaptive MCQs at scale, using streaming-based extraction to handle large documents reliably. Implemented JWT authentication and retry handling across the stack for reliable performance under load, with usage analytics to track engagement. Integrated an AI tutor, flashcards, leaderboard tracking, and wrong-answer analysis workflows into the front end to support adaptive learning.

Begin2Code – Coding Learning Platform January 2026

Tech Stack: HTML, CSS, JavaScript, Python, Flask, Supabase

Developed a responsive, full-stack coding-education platform (HTML/CSS/JS front end, Flask + Supabase backend) for beginner programmers, optimized for multiple devices. Integrated a Supabase-backed database and backend logic to power dynamic user interactions, and deployed the application to production as a live, working product.

CERTIFICATES

Exploratory Data Analysis for Machine Learning, Issued by IBM May 2026

Introduction to HTML, CSS & JavaScript, Issued by IBM December 2025

Inheritance and Data Structures in Java, Issued by Penn University July 2025

Introduction to Java, Issued by LearnQuest December 2024
